Variables and Data Collection

Overview A1: Ideological Variables in the Rebels and Religion Dataset*

Level/item/question	Types	Examples
Rebel level		
Do rebels have theological (religious ideological) claims?	If yes, type of corresponding faith according to PEW list, i.e., Buddhist, Christian, Folk, Hindu, Muslim, other etc.; Christians	IS in Iraq and Syria, Boko Haram in Nigeria (both Sunni Muslim)
Do rebels have other secular ideological claims?	If yes, type of corresponding ideology, i.e., liberal democratic or authoritarian (left-wing/ right-wing/ traditional/ other authoritarian)	Communist FARC and ELN rebels in Colombia, Maoists in India and Nepal
State/government level		
Do states/governments have theological (religious ideological) claims?	If yes, type of faith, see above	Iran (Shia Islam); Saudi-Arabia (Sunni Islam) Vatican City, (Catholic Christian)
Do states/governments have other secular ideological claims?	If yes, type of, see above	E.g., Western liberal democracies, right-wing racist Apartheid South Africa, left-wing authoritarian Communist states in the Soviet bloc
Dyadic level**		
Theological conflict: Do warring factions differ by theological/religious ideological claims?	Types: Rebels with theological claim vs. secular states; secular rebels vs. theocratic state; rebels and states with incompatible theological claims	Islamist IS vs. secular Syrian government; secular Kurd rebels vs. theocratic Iranian state
Secular ideological conflict: Ideological conflict: Do warring factions differ by secular ideological claims?	Types: Rebels with ideological claim vs. unideological state; unideological states vs. ideological state; rebels and states with incompatible ideological claims	Communist vs. liberal democratic rebels during the Cold War; ELN/FARC vs. government in Colombia ANC rebels vs. racist South African government

* The code book includes more detailed information and is available upon request; ** Secular-theological conflicts are a combination of differences of the warring factions (e.g., Jihadists vs Communist government in Afghanistan after 1979).

Overview A2: Coding Process and Quality Management

In general, our data collection was informed by principles of best practice for data collection (e.g., Davenport & Moore 2014; Salehyan 2015) including important elements such as transparency and reliability. The coding process started by identifying “side B” (rebels) in the UCDP/PRIO data set and then coded the main variables (see overview 1 above) by year and rebel group. In most cases, we assigned one code for several conflict-years for one rebel group, resulting in *static ideological codings*. In some cases, however, the government or the rebels changed their ideological position (or religious affiliation) at some point. For instance, UNITA started out as a Maoist inspired anti-colonial rebel group but then turned democratic at the beginning of the Angolan civil war in 1975.¹ In 1979, Iran changed from a rather secular state to a theocratic Shia Islamist state.

The actual coding was performed by research assistants who received thorough training and were constantly supervised by the project leaders. Given the extensive period under investigation from 1946 to 2017 (originally until 2013 but the following years were subsequently added), we could not use news reports such as LexisNexis as the principal source of information. We decided to opt for a variety of primary and secondary sources, including general information on armed conflicts and actors in the UCDP conflict encyclopedia, the Non-State Actors Data Set (Cunningham et al. 2013), and specific sources on political parties and rebels or militant groups (e.g., Szajkowski, 2003; 2005; “Mapping Militants”). A comprehensive list of sources is detailed in the code book that accompanies the data (available upon request).

As a principle, we avoided quick *judgment on theological and secular ideological claims*. The label “Islamic” or any other reference to religious names or symbols did not automatically lead to counting a group as Islamist. This refers for instance to the *Arab Islamic Front of Azawad* (FIAA) in Mali, and in *Moro Islamic Movement* in the Philippines. Although being a borderline case we did not count the Northern Alliance in Afghanistan as an Islamist group either as it included more secular groups and espoused non-religious ideology. While Communists were usually easy to identify, we were similarly cautious with “democratic” rebels. The label “democratic” in the name of a group did not automatically lead to coding it as liberal democratic. The minimal requirement was that actual components of liberal democracy such as free and fair elections as well corresponding liberties were demanded. Several nominally “democratic” rebel groups did not meet this criterion (e.g., the *Allied Democratic Forces*, active in Uganda and the DR Congo, or *Liberians United for Reconciliation and Democracy* in Liberia until 2003). For governments, we were able to include actual credibility of claims to some extent. As indicated in the main text, we used Polity IV data to determine their democratic or authoritarian character of the regimes. In line with Polity rules, a value of not more than -6 denotes an authoritarian

¹ Interviews with the son of UNITA’s founder, Jonas Savimbi, and the UNITA leadership in 2015 in Luanda and Windhoek confirmed that there were liberal democratic claims, especially after independence when the Communist MPLA took over central power in 1975. Leaders however specified, that outsiders may not have “fully understood” the group’s ideology. We cannot rule out instrumentalist use of ideology in order to attract outside support.

government and a value of +6 a democratic one.

If coders were unsure, we indicated lower certainty with lower *precision codes* (1 indicating high, 2 lower precision) and commented on the reason thereof. We also engaged in close supervision as well as additional research on “imprecise” cases. Following best practice in data collection (e.g., Salehyan 2015), we cross checked the reliability of our codings on religious rebels and conflicts with similar datasets by Svensson (2007) on inter-religious conflicts, and Basedau, Pfeiffer & Vüllers² (2014). These datasets altogether cover 249 out of around 500 conflict dyads. When considering some conceptual deviations between these works and the R&R dataset, we found deviations of around 8 to 14 percent. Deviating cases were investigated further. As our reference sources only cover the period from 1975 to 2010, we conducted extra checks before 1975 and after 2010, particularly in cases with lower precision in the coding (precision code 2). For cross-checking with RELAC (Svensson & Nilsson 2018), that uses other definitions (see main text), please refer to the tables on the overlap below (Tables A9-12).

After provisionally finalizing the data set, *double coding of a random sample* of 10 per cent of the rebel group cases and dyads was performed (religious conflicts and 1946 to 2013 only). Inter-coder reliability proved to be satisfactory overall and stands at over 96 per cent on average. Inter-coder reliability varies across the different variables. Particularly, theological claims by rebels and the state are very reliable (96–100 per cent). Affiliations to religious communities for rebels have 94 per cent reliability, with 90 per cent reliability for the state. The dyadic codings proved to be the most reliable. Reliability stands at 96 per cent for inter-religious conflicts and at 100 per cent for theological conflicts.³

Several *caveats* on the dataset are in order. First, despite our efforts, we cannot exclude error. Second, we did not judge whether the ideological claims by rebels were genuine or just instrumental. We took their claims at face value. Our data set captures their rhetoric rather than their actual intention or motive. We do not claim that labeling an armed conflict “religious” or “ideological” means that we assume a causal link between religion or a given secular ideology and violence. As rebels are usually not in power, we cannot assess the authenticity of their demands.⁴ The coding does not claim to assess how salient the ideological claims are, unlike, for instance, the RELAC data set by Svensson and Nilsson (2018). However, the coding of specific, abstract, and elaborate ideologies such as Communism, Islamism or Liberal Democracy may indicate a salience on its own. Moreover, higher precision codes may indicate a higher salience indirectly. As noted above, the data set contains little information on the changes in ideological claims within one rebel group over time. Rather, changes in ideological ideas over time are visible in some

² Despite one author being identical, the conflicts were coded independently by different research assistants based on different sources.

³ The double coding and the other additional checks do refer to the religious part of the coding only thus far. A similar process is planned for secular ideologies.

⁴ The government and the dyadic level are not discussed in this version of the analysis.

conflicts rather than within rebel groups. For instance, in Chechnya, the Philippines, and Israel, the second and third generation of rebel groups tends to have theological goals.

Data Comparisons

Comparison Table C1. R&R to RELAC Comparison, Part 1

	R&R	RELAC	Joint Total	Overlap	Unique to R&R	Unique to RELAC
Temporal Range	1946-2017	1975-2015				
Unique Conflicts	189	202	274	48.8%	31.7%	19.6%
Unique Dyads	509	445	591	61.6%	28.2%	10.2%
Unique Armed Groups (side_b)	496	416	575	62.9%	28.8%	8.2%

		Religion Highly Salient to Conflict Incompatibility	18.4%	0.7670 ***

Descriptive Analysis

Table D1. Frequencies of Ideological and Non-Ideological Rebel Groups, 1946-2017

Type of Armed Conflict	Source	Years Active	%	N of rebel groups (conflict-dyads)	%
All intrastate armed conflicts (in using data)	UCDP	2,576	100	514	100
Religious theological rebels	R&R	532	20.7	92	17.9
Secular ideological rebels	R&R	1,017	39.5	169	32.9
Non-ideological rebels	R&R	1,037	40.3	255	49.6

Note that two rebel groups, with 10 years of armed activity, advanced both religious and secular ideological claims, so aggregate percentages sum to slightly greater than 100%.

Table D2. Duration and Intensity by Rebel Types, Intrastate Armed Conflict, 1946-2017

	Source/Remarks	Active - years / groups	Average duration in years	Average intensity (% years > 1000 brd)	Average intensity (UCDP brd, 1989-2018) best estimate
1. All intrastate armed conflicts	UCDP, Base line	2576 / 514	9.5	1.22 (21.9)	997.59
2. Secular rebels					
All secular ideological rebels	R&R – Communists to Liberal Democrats	1017 / 169	11.2	1.25 (25.5)	931.1
Authoritarian	R&R – Communists to Monarchists	716 / 100	13.1	1.26 (25.6)	574.88
Left-wing authoritarian	R&R – Communists	667 / 83	13.7	1.25 (25.0)	561.33
Right-wing authoritarian	R&R – Fascists, Racists, ultra-nationalists	28 / 9	2.9	1.32 (32.1)	746.67
Traditional authoritarian	R&R – Monarchists	12 / 3	3.1	1.50 (50.0)	139.5
Liberal democratic	R&R	306 / 70	6.7	1.25 (24.8)	1453.67
3. Religious “Theological” rebels					
All “theological” rebels	R&R, – Christian, Muslim, “Folk”	533 / 92	8.6	1.26 (25.9)	1161.32
Christian (Fundamentalist)	R&R – Catholic to “other”	47 / 9	9.9	1.11 (10.6)	310.49
- Catholic	R&R	26 / 4	11.1	1.15 (15.4)	395.41
- Protestant	R&R	15 / 4	8.5	1.07 (6.7)	294.33
- Other Christian	R&R	6 / 1	8.3	1.00 (0.0)	39.5
Muslim (Jihadist)	R&R – Shia to “other”	483 / 83	8.5	1.28 (27.7)	1278.32
- Shia	R&R	32 / 5	6.6	1.03 (3.1)	232.7
- Sunni	R&R	443 / 75	8.7	1.29 (28.9)	1310.89
- Other Muslim	R&R	8 / 3	2.9	1.63 (62.5)	3687.14
Folk religions	R&R	3 / 1	12.7	1.00 (0.0)	150.67
4. Non-ideological rebels	R&R – cases not under 2. or 3.	1037 / 255	8.4	1.16 (16.0)	900.43
<i>Case count</i>			2,576	2,576	1,378
